3.4 Transmit Power Control (TPC)

3.4.1 Transmit Power Control (TPC) Limit

Mean e.i.r.p. Limits for RF Output Power at the Lowest Power Level	
Frequency Range	Mean e.i.r.p.
5250 MHz to 5350 MHz	17 dBm
5470 MHz to 5725 MHz	24 dBm (see note1)
Note 1: For Slave devices without a Radar Interference Detection function the mean e.i.r.p. shall be less than 17 dBm. TPC is not required for channels whose nominal bandwidth falls completely within the band 5150 MHz to 5250 MHz	

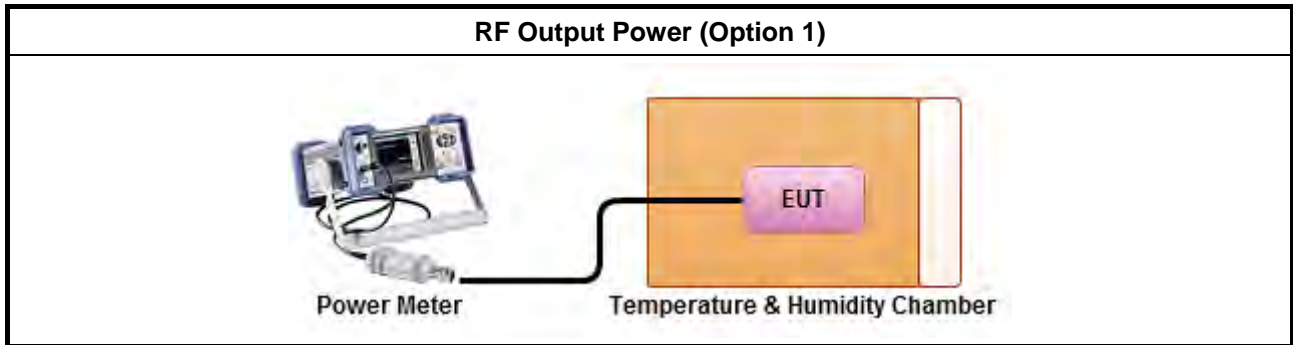

3.4.2 Measuring Instruments

Refer a test equipment and calibration data table in this test report.

3.4.3 Test Procedures

Test Method	
<input checked="" type="checkbox"/>	The measurements shall be performed at both normal environmental conditions and at the extremes of the operating temperature range.
<input checked="" type="checkbox"/>	The EUT shall be configured to operate at the lowest stated transmitter output power level.
<input checked="" type="checkbox"/>	Refer as EN 301 893, clause 5.1.3 for test channel. In case of more than 1 channel plan has been declared, testing of these specific requirements need only be performed using one of the declared channel plans.
<input checked="" type="checkbox"/>	Refer as EN 301 893, clause 5.3.4 for the RF output power shall be measured using below options:
<input checked="" type="checkbox"/>	Option 1: For equipment with continuous transmission capability or for equipment operating (or with the capability to operate) with a constant duty cycle (e.g. Frame Based equipment). Refer as EN 301 893, clause 5.3.4.2.1.2.1.
<input type="checkbox"/>	Option 2: For equipment without continuous transmission capability and operating (or with the capability to operate) in only one sub-band. Refer as EN 301 893, clause 5.3.4.2.1.2.2.
<input type="checkbox"/>	Option 3: For equipment without continuous transmission capability and having simultaneous transmissions in both sub-bands. Refer as EN 301 893, clause 5.3.4.2.1.2.3.
<input checked="" type="checkbox"/>	Refer as EN 301 893, clause 5.3.4.2.1.2 for conducted measurement.
<input type="checkbox"/>	The EUT supports single transmit chain and measurements performed on this transmit chain.
<input checked="" type="checkbox"/>	The EUT supports diversity transmitting and the results on transmit chain port 1 is the worst case.
<input checked="" type="checkbox"/>	In case of conducted measurements on smart antenna systems operating in a mode with multiple transmit chains active simultaneously, the output power of each transmit chain shall be measured separately to calculate the total power (value "A" in dBm) for the EUT.
<input checked="" type="checkbox"/>	If multiple transmit chains, EIRP calculation could be following as methods:
<input checked="" type="checkbox"/>	$P_{total} = P_1 + P_2 + \dots + P_n$ (calculated in linear unit [mW] and transfer to log unit [dBm]) $EIRP_{total} = P_{total} + G$ If more than one antenna assembly is intended for this power setting, the maximum overall antenna gain (G or G + Y) shall be used for EIRP.
<input type="checkbox"/>	Refer as EN 301 893, clause 5.3.4.2.2 for radiated measurement.
