

NEW FEATURES

What's New in Version 2.2.0

* *4-channel models of Mezzo now support up to 4 zones.*

* *New Cloud Integration*

Users can now save projects in the Cloud, invite other users to collaborate on specific projects and store a project version history.

* *New Mono-Mix Sources*

All Mezzo AD models now support Dante sharing of stereo sources as mono mixes.

* *New WM Touch Network recovery!*

Users can now configure the IP address of a WM Touch from ArmoníaPlus, even if it's set in a different subnet.

* *New Dante Flows Warnings*

ArmoníaPlus will display a warning when users are designing a system that potentially exceeds the maximum number of Dante flows supported by Mezzo amplifiers (as per datasheet specs).

* *New Dante Fanout Warnings*

ArmoníaPlus will display a warning inviting users to set their Dante sources to multicast when they are designing a system that may potentially generate Dante fanout conditions.

* *New SNMP implementation*

Powersoft amplifiers now support SNMP network monitoring, allowing the user to read critical and essential information about the status of amplifiers and their operating conditions. Access the Download area of My Powersoft for more information.
